Subject: Re: Water Question

I dropped off a map of the Hickman property yesterday. It clearly shows wash T2N-R7W-S26W across the Northwest corner of the property. The wash floods the road across Indian School road on a regular basis during any substantial rains. Also there is a huge wash separated by a berm (wash T2N-R7W-S34E) adjacent to the west of the property. Another wash originating at the south of the property (T2N-R7W-S36W) in the vicinity of the proposed settling ponds and flowing southeast towards 411 ave.

Yes, Yes! and YES!!! When we have a deluge, there's water running EVERYwhere! Start with Debbie Behling's photo from the STOPP page. She also has a video showing a motorized water craft navigating the waters. Her photo and video clearly show flooding across the entire front of the proposed egg factory. Computer enhancement would show it even more so.

A large wash runs down the whole west side of the property, probably on it, but if not, certainly immediately adjacent. A human made water catchment runs along the south side of the property and the line of trees leading south from the southwest corner of the property are alive and well because they're fed water from that wash every time we have a downpour.

This can be seen at:  
<http://maps.mcassessor.maricopa.gov/default.aspx?id=50634060A>  
We're sure flood maps or Google or something can show it better.

All concerned citizens should keep a camera with them at all times if rain is expected and photograph any flooding in the vicinity of the proposed egg monster. Dust photos might also help.
